ORDER FORM INSTRUCTIONS

STOCK	List the model of the stock adding as much detail as possible. As an example, If it is an integral adjustable cheek piece stock, list "Adjustable". If it is a left handed stock, list "Left Handed".
SHELL TYPE	We offer two different shell materials, Fiberglass and Carbon Fiber. Typically, standard stock are Fiberglass. All finish types can be applied to Fiberglass stocks. Carbon Fiber is typically for lighter weight stocks. There is an additional charge for Carbon Fiber and finish types are limited to paint or Carbon Ambush. On this line you can also indication whether your stock has an integral cheek piece by checking the box to the right.
FINISH	The "Finish" determines the stock's outer appearance. We have several painted and molded-in options. All paint designs are no additional charge. There is an additional charge for molded-in stocks and they take longer to produce. View our "Colors and Finishes" page on our website for finish options and more information.
COLOR	List your finish pattern type here. If the finish you choose allows custom colors (marble, flame, paint and speckletone finishes) list the specific colors (and percentages of each colors if it is a marble finish) here.
FILL TYPE	Fill types are materials of different density. The most significant impact is to weight (more dense is heavier). They are listed in order by weight, lightest to heaviest. "EDGE" fill is for Carbon Fiber stocks for lightest weight. "Edge Enhanced" is used when recoil energy is near that of a 300 Win Mag. The "Sporter" fill is the standard fill used on Fiberglass stocks. "Magnum" fill is used when the cartridge used has MORE recoil energy than a 300 Win Mag. "Sniper" fill is heavier in the butt and is typically used in tactical stocks. "Sniper" can handle recoil energy of cartridges up to .50 BMG.
ACTION	Indicate the bolt and port location, the action size, brand and model of action that you will be using for your build. Include any special designators that help clearly identify your specific action. Be aware that some brands and/or models of actions must be sent in for proper fitment.
FLOOR PLATE OR TRIGGER GUARD	Indicate if this is a single shot, blind magazine, hinged floor plate or detachable box magazine system. Also indicate the brand and model for the bottom metal you will be using even if it is just a trigger guard. Be aware that some brands and/or models of bottom metal must be sent in for proper fitment.
MISC.	If you have upgraded your recoil lug to a thicker one, please indicate the thickness here. If you do not want us to install pillars, then you may request we drill the action screw holes a specific size so you can install your own pillars. Typical sizes are 9/16", 1/2", or 5/8". If you have a factory lug and/or want is to install pillars, leave these blank. Your Caliber/Cartridge (what your rifle shoots) is required to ensure we build the stock to handle the recoil of your rifle.
BARREL	Indicate the brand of your barrel and the contour designated by that brand. The contour may be a number or a name. If you don't know the brand and/or contour ask us for a Barrel Measuring form. This simple form is easy to complete and it gives us everything we need to custom fit your barrel channel. "Cylinder Length" is measured from the face of the action to the first change in the contour of the barrel. We do not need a barrel cylinder measurement for factory barrels from the major gun manufacturing brands.
INLET TYPE	We offer three inlet types. "Full Inlet" is by far the most common. A Full Inlet stock comes ready to install your action and bottom metal. A "Basic Inlet" is just a barrel channel and action outline. It is not inlet for the trigger, recoil lug, bottom metal, bolt, or ports. This options is great for gunsmiths who like to do their own fitting. The "Flat Top" is no inlet, there are no cuts in the stock whatsoever.
RECOIL PAD	We offer several recoil pad and plate systems. Please indicate the type you want installed. If using a fixed Length of Pull indicate the length. Select 13.5" for the industry standard. If you want something other than the industry standard, select Custom and list your finished custom length. Some length limitations apply and not all recoil plate systems are compatible on all stocks.
CHEEK PIECE HARDWARE	If your stock has an integral cheek piece, indicate if you want clamp bar or thumbwheel hardware. A Saddle cheek piece sit externally and fits on some stocks. We can also inlet for a KMW cheek piece (not installed).
STUDS	List the number and location of studs you want installed. Indicate if you want them blued or stainless steel.
FLUSH CUPS	List the number and location of flush mount cups you want installed. Flush mount cups are quick detach, push button sling mounts and can be installed on the bottom and sides of most stocks.
RAILS	McMillan produced rails are in the Picatinny and ARCA configuration. Our 4" rails come with your choice of an integrated flush mount cup or stud. Not all stocks can accommodate rails.

There are three ways to order your McMillan fiberglass stock:

- Call 877.365.6148 to place your order
- Fax this order form to 623.581.3825
- Or scan and email it to stocks@mcmillanusa.com
